

ZOOPLANKTON VOLUMES OFF THE PACIFIC COAST, 1956

SPECIAL SCIENTIFIC REPORT-FISHERIES No. 232

UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE

EXPLANATORY NOTE

The series embodies results of investigations, usually of restricted scope, intended to aid or direct management or utilization practices and as guides for administrative or legislative action. It is issued in limited quantities for official use of Federal, State or cooperating agencies and in processed form for economy and to avoid delay in publication.

United States Department of the Interior, Fred A. Seaton, Secretary
Fish and Wildlife Service

ZOOPLANKTON VOLUMES OFF THE PACIFIC COAST, 1956

James R. Thrailkill
Fishery Research Biologist

Special Scientific Report--Fisheries No. 232

Washington, D. C.

October 1957

Abstract

Basic data on volumes of zooplankton off the Pacific coast in 1956 are given, together with haul data for all plankton hauls taken on survey cruises of the California Cooperative Oceanic Fisheries Investigations. Distribution charts showing relative areal zooplankton abundance by month are included.

Zooplankton Volumes off the Pacific Coast, 1956

The six reports in this series preceding this one have appeared under the authorship of the staff of the South Pacific Fishery Investigations. They cover the seven-year period, 1949 through 1955. Distribution charts for all routine cruises made during these years have been presented in Threlkell, 1956. This report combines both the basic data on zooplankton volumes and distribution charts of zooplankton abundance for each cruise made in 1956 off the Pacific coast of California and Baja California.

Plankton collections are used by the South Pacific Fishery Investigations of the Fish and Wildlife Service in studying the distribution and abundance of the egg and larval stages of the Pacific sardine and other commercially important or potentially important fishes. Basic data on fish eggs and larvae are given in a yearly series of reports in Special Scientific Report--Fisheries which parallel those on plankton volumes. Plankton collections are also used by Scripps Institution of Oceanography of the University of California in studying the productivity of spawning areas.

The research vessel, Black Douglas, operated by the U. S. Fish and Wildlife Service made all cruises between February and September. Five vessels operated by the Scripps Institution of Oceanography made cruises during 1956. The vessels participating in each cruise were as follows:

Month	Cruise number	Number vessels used	Number				PAOLINA T.	ORCA
			BLACK DOUGLAS	SPENCER F. BAIRD	HORIZON	STRANGER		
January	5601	2			X		X	
February	5602	3	X	X			X	
March	5603	2	X				X	
April	5604	3	X	X			X	
May	5605	3	X	X			X	
June	5606	3	X	X				X
July	5607	3	X				X	X
August	5608	1	X					
September	5609	1	X					
October	5610	1	*					X
November	5611	1	*					X
December	5612	2	*		X			X

*Special cruise

Figure 1.—Average Plankton Volumes
1956

A chronological listing of California Cooperative Oceanic Fisheries Investigations cruises for 1956, with information of the area covered and the numbers of stations occupied on each cruise follows:

Month	Cruise number	Area covered, station lines	Number of stations occupied
January	5601	80-157	112
February	5602	80-157	132
March	5603	80-137	135
April	5604	60-157	179
May	5605	40-137	239
June	5606	40-137	210
July	5607	60-137	203
August	5608	110-137	36
September	5609	110-137	36
October	5610	80-97	42
November	5611	80-97	40
December	5612	80-97	42

The tables in this report contain a record of the "wet" plankton volumes of all plankton samples taken on routine survey cruises off the Pacific Coast during 1956 (columns 9 and 10), and contain basic information on each haul, including station number (column 1), location (columns 2 and 3), date and time of collection (columns 4 and 6), volume of water strained (column 7) and the estimated depth of the haul (column 8).

Wet plankton volumes are determined as follows: the plankton is separated from its preserving liquid (3% formalin) by filtering, allowed to drain and the displacement volume is obtained by placing drained wet plankton in a graduated cylinder with a known volume of water. Two volumes are recorded for each station: (1) the total wet volumes standardized to the amount in one thousand (1,000) cubic meters of water strained, and (2) the volume of smaller organisms after removal of larger organisms, such as jellies, fish, squid, salps, pyrosomes, larger molluscs and larger crustaceans. The criterion used for a larger organism (except in the case of juvenile or adult fish) is one whose volume exceeds five cubic centimeters (5 cc.).

The charts in this report are based on the volume of smaller organisms. In order to obtain a good contrast between light and heavy concentrations of plankton, five categories have been used to divide the abundance of plankton as follows: (1) light, 0 to 33 cc. of plankton per 1,000 cubic meters of water strained; (2) moderate, 34 to 100 cc. of plankton per 1,000 cubic meters of water strained; (3) average, 101 to 300 cc. of plankton per 1,000 cubic meters of water strained; (4) fairly heavy, 301 to 900 cc. of plankton per 1,000 cubic meters of water strained; (5) heavy, more than 900 cc. of plankton per 1,000 cubic meters of water strained.

Two types of plankton nets were used in the collection of samples: (1) constructed of No. 30xxx grit gauze (an extra heavy type of silk bolting cloth); (2) constructed of nylon, but whose dimensions and mesh sizes are approximately one hundred and forty (140) meters deep to the surface (depth of water permitting).

These investigations are part of the California Cooperative Oceanic Fisheries Investigations, a program sponsored by the Marine Research Committee and carried out by the Scripps Institution of Oceanography of the University of California, the Bureau of Marine Fisheries of the California Department of Fish and Game, the California Academy of Sciences, the Hopkins Marine Station of Stanford University and the South Pacific Fishery Investigations of the Fish and Wildlife Service.

It is with deep pleasure that the author acknowledges the cooperation given by the Scripps Institution of Oceanography in the collection of data at sea. All personnel of the South Pacific Fishery Investigations contributed to this project--many devoting their full time to it.
